QGIS Plugin Portfolio Forensic Audit

Unified 7-Plugin Sybil Attack Dossier & Web Portal Vulnerability Analysis

Author: Yusuf Eminoğlu
Dossier Date: Aug 24, 2026 21:44 UTC
Official Issue: qgis/QGIS-Plugins-Website #432
Live Telemetry: yusufeminoglu.github.io

7 Plugins	~101 Votes	-360+ Pts	3 Waves	55 Snapshots
CONSOLIDATED TARGETS	TOTAL 1-STAR SUBMISSIONS	CUMULATIVE SCORE LOSS	AUG 9, AUG 15 & AUG 24	IMMUTABLE TELEMETRY STORE

🚨 **ROOT CAUSE & WEB PORTAL VULNERABILITY:**
The attack is executed via the **unauthenticated rating endpoint on the plugins.qgis.org web portal** (not from the QGIS desktop client). Opening incognito browser tabs or clearing cookies generates a fresh anonymous session, allowing automated scripts to cast unlimited 1-star votes without downloading or running the plugin.

2. Proposed Long-Term Architectural Safeguards

1. Mandatory Written Feedback / Issue for 1★ and 2★ Ratings: Require users giving low scores to provide a constructive explanation or issue tracker link. Reject anonymous 1-click low ratings.

2. Require Account Authentication & Download Verification: Restrict rating submissions to logged-in QGIS Hub accounts that have verified downloads, eliminating anonymous bot farms.

4. Unified Database Remediation Directives (Single SQL Transaction for Hub DBAs)

Executing this single atomic transaction completely purges all fraudulent 1-star submissions across all 3 waves and recalculates authentic community ratings for all 7 plugins:

```
